

2006-2010 Website Program Description

Remote Viewing Applications to Financial Markets

A 4-Day Weekend at the World-Renowned Monroe Institute in Faber, Virginia

Do you have an uncanny sense of knowing? Are you successful in what you do? Have others admired you and looked to you for guidance, leadership, and direction? You may be a natural intuitive. We are privileged and delighted to offer the opportunity to learn an eminently practical application for your innate abilities—a special application of what has become known as Associative Remote Viewing or ARV.

This is an intensive 4-day workshop that teaches you how to use Associative Remote Viewing as an intuitive forecasting strategy and then as an aide to investment decision-making based on the use of redundant, error-detecting protocols. You will learn how to use this technique to invest in the stock and commodity futures markets on your own. But if you would rather have the support of professionals and are willing to be an active participant, you will learn how to become part of an investment club.

Even more exciting, you'll learn this unique strategy directly from two experts in the field, Skip Atwater, Research Director at The Monroe Institute and Marty Rosenblatt, a physicist who has a long history of putting this system into practice.

Unlike a number of the advanced courses at The Monroe Institute, this workshop is open to the public, has no prerequisites, and requires no previous training in remote viewing. This is an intensive, hands-on weekend workshop where you'll learn the intuitive forecasting theory and then make actual market trades using your skills.

Attendance is limited – register early!

The cost of this workshop is only \$1,000, which includes your room, all your meals and snacks, and free shuttle transportation from and to Charlottesville. If you want to join the ARV Investment Club, you will need to plan on an additional \$1,000 to invest.

In this hands-on workshop, you will learn the theory and then make the actual market trades.

- Day One will introduce you to the Monroe Institute's audio-guidance technology for enhancing your intuitive abilities.
- On Day Two you learn Remote Viewing protocols, and then you'll learn the simple technique of Associative Remote Viewing. Skip and Marty will do live analysis and judging of participants' ARV sessions, and you'll learn to do the same kind of analysis yourself. By the end of the day, you'll be doing ARV for a simulated trade.
- Day Three of the workshop will delve deeper into simulated online trading. You'll be involved in making buy-and-sell decisions.
- You'll do actual online, live trading on the last day. Each student will be involved in making – and executing – real buy-or-sell decisions. All positions are closed out before the end of the workshop, so that risk is minimized. When the workshop is over, you'll go home and can continue trading on your own for as long as you like.

Q&A

Q. How will investing be done after the workshop?

A. Either on your own or as part of an existing group of professionals, the ARV Investment Club.

Q. Are there any fees or costs associated with this ARV Investment Club?

A. Actually, there are no fees or costs to join the club. An initial investment of \$1,000 is all that is needed, well almost all that is needed. Club members are expected to actively participate in the ARV forecasting strategy. The club is not an investment fund to which you simply send a check. If you do not actively participate, your money will be returned.

Q. Do I need to have an email address?

A. Yes, this will be the primary way we will provide ARV sessions and coordinates after the workshop. Please provide your email address when you register.

Q. Do I need to bring any supplies?

A. Maybe your favorite writing pen.

Q. Will I be trading during the workshop?

A. Yes, with all trades being closed out by the end of the workshop to minimize risk.

Q. Will I be able to continue trading after the workshop?

A. Yes, on your own or as part of the ARV Investment Club.

Q. Can we get our \$1,000 investment at any time?

A. The \$1,000 investment may go up or down in value. You can pull out your current account value at the end of any day; a check will be sent to you within five business days. Your account value is your original investment plus/minus any profit/loss due to trades. Again, there are no fees or costs associated with joining the ARV Investment Club. The \$1,000 is your money, your investment.

Q. How will I know what my account value is?

A. You will have a password-protected webpage with your account value. Webpages will also display tables and graphs showing your historical performance.

Q. Can I really make money by participating in the workshop?

A. There is no guarantee that you will make money. You might actually lose money.

Q. Is it a requirement that I must already have learned remote viewing?

A. No, you will learn during the first and second days of training all you need to know to successfully remote view ARV targets.

Q. What is the value of being part of the ARV Investment Club?

A. Fun, personal growth and the value of making consensus ARV decisions. The Monroe Institute suggests that through the experience of remote viewing one can discover through practice that they truly are more than their physical bodies and recognize the true nature of non-local consciousness. But these concepts can be more than philosophic thoughts sprinkled in words throughout well-meaning books. Actively participating in the ARV Investment Club provides the opportunity to essentially "practice what you preach" or in more practical terms, "put your money where your mouth is".

Skip Atwater

Skip, a retired military officer, is Research Director at The Monroe Institute, an organization promoting the evolution of human consciousness, and President Emeritus of the International Remote Viewing Association. He is the author of the revealing book, *Captain of My Ship, Master of My Soul*, and former Operations & Training Officer for the US Army's cold-war remote viewing initiative called STAR GATE. Skip has also been a college instructor, scientific investigator, and human behavioral engineer specializing in the design and application of techniques for cultivating propitious states of consciousness for over three decades.

Marty Rosenblatt

Marty has worked as a computational physicist and managed many projects in development and application of sophisticated computer programs for analyzing high-energy problems of interest to the Dept. of Defense and NASA, e.g. hypervelocity impact and nuclear weapons effects. He was a founder, CEO and senior staff scientist of PhysiComp Corp. (1994) and its Internet subsidiary. An Internet company acquired these, and Marty is now President of PIA (Physics Intuition Applications). Marty had designed, managed, and participated in eight ARV protocols. These protocols involved trading in financial markets and were developed and improved over the last five years. Marty's focus in this workshop will be to teach, with hands-on experience, the most successful protocol, Protocol 8 that was successfully tested with 15 viewers over a 17-month (January 2003 – May 2004) period. 13 of the 15 viewers made a profit and there was an overall success rate of 60.7% where only 50% is expected by chance.
